^{1/} A measure of the relative uniformity of the length of fibers; if all fibers were the same length, uniformity index would equal 100. 2/ A measure of the percent of the sample surface covered by trash particles as measured by a video scanner; 1.2 indicates that trash particles cover 1.2 percent of the sample surface. Trash particles include extraneous matter such as grass, bark, etc. "Less than 0.05 percent."

| | | | | | | | | | |

1/ A measure of the relative uniformity of the length of fibers; if all fibers were the same length, uniformity index would equal 100. 2/ A measure of the percent of the sample surface covered by trash particles as measured by a video scanner; 1.2 indicates that trash particles cover 1.2 percent of the sample surface. Trash particles include extraneous matter such as grass, bark etc. *Less than 0.05 percent.
